

IN THE CLAIMS

Please cancel claims 1-49 before calculating the filing fee for the present application. The current claims for this application are listed below.

Claims 1-49 (Canceled).

50. (New) A compound having the general formula S-L-X wherein:
- the X moiety is an aryl substituted with at least one atom having a K-absorption edge of about 13 keV to about 91 keV;
 - the S moiety is selected from pyranose, furanose, oligonucleotide, and fatty acid; and
 - the L moiety is an inhibitor of steric hindrance by said X moiety of binding by said S moiety to said cellular target, said L moiety linked to said X moiety and to said S moiety.
